# Psychology A Level

## Summer Bridging Work

Memory is one of the units covered in A Level Psychology at Weald of Kent Grammar School.

Please complete the following tasks:

- 1) Research the multistore model of memory
  - i) Who proposed the theory?
  - ii) What did they propose that memory consists of?
  - iii) How did they propose that information moves from 'store to store'?
  - iv) Find and produce a diagram to demonstrate how information passes through memory
  - v) How did they propose that information in the short term memory is moved to the long term memory?
  
- 2) Find definitions for the following key terms
  - i) Encoding
  - ii) Capacity
  - iii) Duration
  
- 3) How does sensory memory, short term memory and long term memory work in relation to encoding, capacity and duration?

EXT: Research the work of Glanville and Cunitz. What did they propose in relation to memory?

Try and include

- Hypothesis
- Research method
- Findings and conclusions

*We look forward to seeing  
you in September!*
